

# popstahl kitchen

This kitchen by popstahl is made from 100% steel, making it robust and durable. The color is applied through a process of powder coating in which no solvents are used and the color is fused directly with the metal. Over 100 RAL colors are available, including this vibrant red beet option. New colors can be layered on top of the old one to

create new looks and individual parts exchanged for others in a different color. The purpose-built colored paneling on the face fits flush with the steel sheets and contrasts with the metal. Popstahl's kitchens can be 100% recycled, although the durability of the materials means that replacement is rare.

DESIGN: architects Christian Thommes and Ralf Weissheimer  
 PRODUCER: popstahl Thommes and Weissheimer  
 YEAR OF DEVELOPMENT: 2009  
 MAIN MATERIAL: powder-coated galvanized sheet steel
